SUMMARY

Software Engineer building production backend and AI infrastructure for Dell's enterprise storage platforms, specializing in agentic workflows, automation, and distributed systems.

TECHNICAL SKILLS

Backend & Data Systems: Python, Go, Java, REST, gRPC, GraphQL, Microservices, Temporal, RabbitMQ, Kafka, SQL, PostgreSQL, pgvector, Redis, MongoDB, DynamoDB

AI & Agentic Systems: LangGraph, LlamaIndex, MCP, A2A, Agentic Harnesses, RAG, Tool Calling, Agent Memory, Human-in-the-Loop, Evals, Guardrails, Harbor, Prompt Engineering, Hugging Face, Vector Databases

Cloud, DevOps & MLOps: AWS, Azure, Kubernetes, Docker, Helm, CI/CD, KServe, TorchServe, MLflow, Terraform

Observability & ML: OpenTelemetry, Prometheus, Grafana, Claude (Bedrock), Spark, Scikit-learn, CUDA, MLPerf

EXPERIENCE

Dell Technologies | Software Engineer 2, Automation Platform Engineering Feb 2026 – Present

- Shipped a **0-to-1 agentic AI platform** using **LlamaIndex ReAct, Claude on Bedrock, and A2A**, automating Dell storage maintenance and reducing **task completion time by 70%**, **demoed** at Dell Technologies World by Dell's ISG President.
- Designed **multi-step LangGraph agent orchestration** with stateful memory and human-in-the-loop checkpoints, using **MCP servers** for credential rotation, diagnostics, and provisioning across **multi-tenant Azure Kubernetes**.
- Built a production RAG system over **200+** documents by **chunking, embedding, and indexing**; cut repeat-query **P95 latency by 83% (2.4s to 400ms)** with Redis caching.
- Architected the **event-driven ingestion pipeline** in RabbitMQ, **1.2M+ messages daily** with priority routing, backpressure, and **idempotent delivery**.
- Drove org-wide adoption of **Spec-Driven Development with AI agents** across **27+ pods**, cutting implementation time by **50%**.

Dell Technologies | Software Engineer 1, Data Platform and Research Jul 2024 – Jan 2026

- Contributed to the Dataset Interface (patent pending), integrating an enterprise AI data platform with backup and recovery services to automate AI dataset protection, improving **cyber resilience and recovery**.
- Optimized **Go control-plane APIs** with **Redis caching and query tuning**, reducing response times **40%** while improving reliability with integration contract testing.
- Containerized **MLPerf Storage** and **CUDA** workloads into reusable Dell validation pipelines, eliminating **hundreds of hours** of manual environment setup across product teams.
- Built **Spark pipelines and Python operators** turning raw telemetry into ML-ready features for predictive maintenance and anomaly detection.

Cummins | Machine Learning Intern Aug 2023 – Nov 2023

- Built **ML pipelines in Python** forecasting regional performance, improving accuracy **12% over baseline to 78%**.
- Engineered automated **ETL pipelines** for data extraction, cleaning, transformation, and model-ready feature preparation, reducing manual reporting effort by **~60%**.

Dell Technologies | Software Engineering Intern May 2023 – Aug 2023

- Deployed **Cloudify on Dell infrastructure**, enabling one-click HA Kubernetes deployment with a production ML serving stack using **KServe, TorchServe, and NVIDIA GPU Operator**.
- Modeled runtime state for physical and logical resources in **Dgraph**, extending the ISGOne control-plane orchestrator to maintain digital twins of deployed systems.

PROJECTS

Multi-Agent Trading Simulation June 2026

- Built a **multi-agent** trading platform using **LangGraph and MCP**, with RAG over historical market data that prevents agents from accessing future information during backtests.
- Developed a **Go order-matching engine** supporting price-time priority, partial fills, and reliable, idempotent trade execution.

Agent Cost & Latency Profiler April 2026

- Built an **agent harness for LangGraph workflows** with tool execution, trajectory tracing, token/cost/latency profiling, and **circuit breakers** for runaway agent loops.
- Integrated **Harbor-based agent evaluations** and **OpenTelemetry tracing** to measure task success, tool-call accuracy, and execution paths across agent runs.

EDUCATION

Texas Tech University | B.S. Computer Science, Minor in Mathematics | **GPA 4.00**

May 2024
